

ST7735S 160×80 display mock

This KiCad project models the mechanical envelope of the 0.96-inch ST7735S 160×80 display module used by the interposer. It was migrated from `interposer-hardware/display-mock` on 2026-08-25 and renamed without changing the board geometry.

The display solid referenced by the PCB lives in `../..libs/3dmodels/OnMCU_Display.3dshapes/`. Its scripted source and dimensional contract are maintained by the `onmcu_cad_parts` package in the `scripted-cad` repository; see the provenance note beside the STEP files.

`ST7735S_160x80_display_mock.step` in the shared 3D library is a KiCad STEP export of this PCB used as a nested model by the interposer top board.
