

Interposer hardware — top PCB

This project is the requested initial duplicate of **interposer-hardware-bottom**, created during the 2026-08-25 migration. All project, schematic, and board identifiers were renamed to **interposer-hardware-top**; its electrical and mechanical design otherwise starts identical to the bottom board.

The whole ST7735S display-module mock is referenced from the shared 3D model library, so a populated STEP export contains the display assembly. The board still inherits the bottom design's parked footprints and must be reviewed as a new hardware design before fabrication.
